Reg. No. :

Name :

VI Semester B.Sc. Degree (CBCSS - Supplementary) Examination, April 2023 (2017 to 2018 Admissions) CORE COURSE IN MATHEMATICS

6B11MAT : Numerical Methods and Partial Differential Equations

Time: 3 Hours

Max. Marks: 48

SECTION - A

Answer all the questions. Each question carries 1 mark. 1. Give Newton's forward difference interpolation polynomial.

- 2. Write down the two dimensional Laplace equation.
- 3. Find the order of the partial differential equation $\frac{\partial^3 u}{\partial x^3} + \left(\frac{\partial u}{\partial x}\right)^2 = 0$.
- 4. Show that $u = e^{-t} \sin x$ is a solution of the differential equation $\frac{\partial^2 u}{\partial x^2} = \frac{\partial u}{\partial t}$.
- SECTION B

Answer any eight questions. Each question carries 2 marks.

5. Show that the smallest positive root of $x^3 - 3x - 1 = 0$ lies in the interval (1, 2).

- 6. Using the method $f'(x_0) = \frac{1}{2h}[-3f_0 + 4f_1 f_2]$, obtain an approximate value of f'(-3) with h = 2, for the following data:

f(x) -25 -14.125 -7 -1 -1
7. Evaluate
$$\int_0^2 \frac{dx}{x^2 + 2x + 10}$$
, using trapezoidal rule with n = 2.

P.T.O.

8. Construct the divided difference table for the following data:

K23U 0228

-2-

x -3 -2 -1

- integration.

two iterations of Picard's method.

taking suitable initial approximation.

11. Explain the terms Quadratic rule and Error of approximation in numerical

12. Solve the partial differential equation $y^2u_x - x^2u_y = 0$, by separating variables

13. Verify that $u = x^2 + y^2$, f = 4 satisfies the partial differential equation $\frac{\partial^2 u}{\partial y^2} + \frac{\partial^2 u}{\partial y^2} = f$.

14. Find the solution of the initial value problem y' = x + y, y(0) = 1, by performing

SECTION - C

15. Find the approximate value of y(1.2) for the IVP $y' = -2xy^2$, y(1) = 2, using

Taylor's second order method. 16. Find u(x, t) of the string of length π , $c^2 = 1$, initial velocity zero and initial deflection

Answer any four questions. Each question carries 4 marks.

- $0.1x(\pi^2-x^2)$. 17. Find the Lagrange interpolation polynomial that fits the following data values:
- 7 61 f(x) 18. Using Newton Raphson method, find the value of 183 upto four decimal places
- 20. Evaluate $\sqrt{3}$ using the equation $x^2 3 = 0$ by applying the fixed point iteration method.

19. Transform the equation $u_{xx} + 4u_{xy} + 4u_{yy} = 0$ into normal form and solve.

21. Find the value of $\int_0^1 \frac{dx}{2+3x}$ using Simpson's rule with n = 2 and compare this value with the exact solution.

22. Find the solution of one dimensional heat equation by using Fourier series. 23. Solve the initial value problem, y' = x(y - x), y(1) = 2 in the interval [1, 1.2] using

-3-

SECTION - D

the classical Runge-Kutta fourth order method with the step size h = 0.1. 24. The following table represents the function $f(x) = e^{-x}$. 0.5 -0.5

ii) Using Gauss backward central difference formula, compute f(-0.25).

2.75 2 0.75 f(x) Using Gauss forward central difference formula, compute f(0.25).

Answer any two questions. Each question carries 6 marks.
