

Reg. No. : .....  
Name : .....

I Semester M.Sc. Degree (CBSS-Reg./Sup./Imp.) Examination, October 2022  
(2019 Admission Onwards)

**PHYSICS**  
**PHY1001 : Mathematical Physics - I**

Time : 3 Hours

Max. Marks : 60

**SECTION - A**

Answer both questions. (either a or b), each question carries 12 marks. ( $2 \times 12 = 24$ )

1. a) Express the unit vectors in spherical polar coordinate system in terms of the unit vectors in Cartesian coordinates.

OR

b) Diagonalize the matrix  $A = \begin{pmatrix} 2 & 1 & 1 \\ 1 & 0 & -1 \\ 1 & -1 & 2 \end{pmatrix}$ .

2. a) Discuss the Laurent series. Find the Laurent series of the function

$f(z) = \frac{1}{1-z^2}$  with centre at  $z = 1$ .

OR

b) Deduce the relation  $\beta(m, n) = \frac{\Gamma(m)\Gamma(n)}{\Gamma(m+n)}$  and hence show that

$$\Gamma(m)\Gamma(1-m) = \frac{\pi}{\sin m\pi}. \text{ Given that } \int_0^\pi \frac{y^{m-1}}{(1+y)} dy = \frac{\pi}{\sin m\pi},$$

**SECTION - B**

Answer any four questions, Part a carries 1 mark, Part b carries 3 marks and Part c carries 5 marks. ( $4 \times 9 = 36$ )

3. a) If R is an orthogonal matrix, show that  $\det R = \pm 1$ .  
b) Show that the product of two orthogonal matrices is orthogonal.  
c) Find the most general  $2 \times 2$  orthogonal matrix.

P.T.O.

K22P 1588

4. a) Show that  $\nabla \times \vec{F} = 0$ .  
b) Resolve the cylindrical unit vectors into their Cartesian components.  
c) Obtain the Laplacian operator in cylindrical coordinates.

5. a) Comment on the eigenvalues of an anti Hermitian matrix.

- b) Show that the eigenvectors of a unitary matrix is unimodular.

- c) Consider the matrices  $A = \begin{pmatrix} 2 & 1 & 1 \\ 1 & 0 & -1 \\ 1 & -1 & 2 \end{pmatrix}$  and  $B = \begin{pmatrix} 1 & 0 & 1 \\ 0 & 0 & 0 \\ 1 & 0 & 1 \end{pmatrix}$ . Verify whether

they can be simultaneously diagonalized, and find the common eigenvectors of the two matrices.

6. a) Evaluate  $\delta_{ik}\delta_{jk}$ .  
b) Evaluate all the components of Levi civita tensor  $\epsilon_{ijk}$  in three dimensions, if  $\epsilon_{123} = 1$ .

- c) Show that for Levi civita tensor,  $\epsilon_{ijk}\epsilon_{pqk} = \delta_{ip}\delta_{jq} - \delta_{iq}\delta_{jp}$ .

7. a) Write down the generating function for the Legendre polynomials.

- b) Obtain  $P_1(x)$  and  $P_2(x)$  from the generating function.

- c) Show that  $P'_{n+1}(x) - P'_{n-1}(x) = (2n+1)P_n(x)$ .

8. a) Develop the Taylor expansion for  $\ln(1+z)$ .

- b) Find the analytic function  $w(z) = u(x, y) + iv(x, y)$  if  $u(x, y) = x^3 - 3xy^2$ .

- c) Find the residue of  $f(z) = \frac{e^z}{z^2 + z^2}$  at its singularities.
